Product & commercial proposal · Growie

# *Financial infrastructure for the Digital Assets Economy.*

*Launch digital assets, move value, and distribute them under your brand with infrastructure built for enterprises and fintechs.*

# *What we have built*

*One platform. Ready capabilities. Adopt only what the program needs.*

## ***Complete platform***

Issue, distribute, and operate digital assets in one environment — without assembling a chain of vendors.

Built for regulated environments

ryle.sh

## ***Modular adoption***

Blockchain Infrastructure and White Label Wallet are adopted together for Growie: issue and distribute from one platform.

Interoperable · Customizable

## ***Control & compliance***

Roles, policies, audit trail, and controlled disclosure — aligned to demanding frameworks, including MiCA mapping.

Audit · Disclosure under control

## ***Short path to production***

From months of custom build to days in a test environment and weeks to a partner-ready pilot.

Guided engagement methodology

Financial infrastructure

# Identified Growie pain points and how Ryle can help

| WHAT GROWIE WANTS TO DO       | TODAY                                                                                                                                            | WITH RYLE                                                                                                                   |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <i>Ship a new idea</i>        | <i>Costly, difficult &amp; bureaucratic</i><br>Every change queues behind one engineer maintaining the platform that already exists              | <i>You ask. We ship.</i><br>Bring the idea — Ryle's team builds and delivers it fast on infrastructure that already runs    |
| <i>Launch a new asset</i>     | <i>Custom build</i><br>Each new product means application work on a five-year-old architecture                                                   | <i>Configure &amp; launch today</i><br>Define the asset, its policies, and its limits from the Control Panel — then go live |
| <i>Reach the end customer</i> | <i>Build every feature yourself</i><br>Your own team has to ship each capability from scratch — weeks of work before anything reaches a customer | <i>Turn it on</i><br>The most common wallet features are already built — enable them under Growie's brand at no extra cost  |
| <i>Change direction</i>       | <i>Replatform</i><br>One architecture since year one; changing course means rebuilding it                                                        | <i>Modular</i><br>Adopt, swap, or expand modules as the program changes, without starting over                              |
| <i>And what it costs</i>      | <i>~USD 13.000/mo</i><br>(+ additional unexpected costs) · Infra, engineering time, bureaucracy, and payroll management                          | <i>USD 8.500/mo</i><br>Flat fee, with hosting, ops, updates, and support included                                           |

# Growie’s next release shouldn’t wait on one engineer

|                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div>TIME TO MARKET</div> <div><i>The platform already runs</i></div> <div>Infrastructure, Control Panel, and wallet are in production today. Growie configures and integrates instead of building from zero — sandbox in days, production flows in weeks.</div> | <div>DELIVERY CAPACITY</div> <div><i>A team, not a queue</i></div> <div>Ryle product and engineering work the program in parallel with Growie's commercial team, so delivery is not bounded by one person's availability. Capacity can be added on demand.</div>       | <div>HOW WE BUILD</div> <div><i>Agent-assisted delivery</i></div> <div>We build with autonomous agents in the loop rather than reviewing change by change, so scoped work that used to take quarters lands in weeks.</div>              |
| <div>OWNERSHIP</div> <div><i>Your data, customers, and brand</i></div> <div>Data, customers, brand, assets, and accesses remain 100% Growie's, legally. Growie's value stays where it is created: origination and the customer relationship.</div>               | <div>ACCESS &amp; EXIT</div> <div><i>Full access, no lock-in</i></div> <div>Complete access under the as-a-service model: code and credentials on Growie's side, an exportable audit trail, and a documented exit path with continuity if the relationship ends.</div> | <div>COMMERCIAL PROTECTION</div> <div><i>No competing for your customers</i></div> <div>Ryle does not approach Growie's customers or offer them competing products. The commercial relationship stays with Growie, contractually.</div> |

*δ Ryle*

# *How we can solve Growie problems using Ryle*

---

## *Blockchain Infrastructure*

Issue and operate digital assets end to end

## *White Label Wallet*

Distribute under Growie's brand to the end customer

# Blockchain Infrastructure

*Issue, manage, and operate RWAs, stablecoins, and digital assets on public infrastructure.*

Ryle runs the program infrastructure: Control Panel for operations, APIs for product teams.

## Use cases

- Real-estate asset tokenization
- Digital securities issuance
- Debt and loan tokenization
- Asset-backed stablecoins

Treasury vs supply

## Features

- Asset lifecycle: launch, issue, redeem, pause, and wind down
- Supply and reserve reconciliation against custody
- Policies for who can operate, limits, and control lists
- Multi-user Control Panel with roles and permissions
- APIs and webhooks to connect your product and systems
- Immutable audit trail of every privileged action
- Settlement on Ethereum, Polygon, Base, and more

## Create Assets

Name and configure your digital asset and deploy it to testnet.

Create asset

## Connect your custody

Choose how to hold and sign for assets.

Configure custody

## Benefits

- Configure and launch a new asset without a custom build
- Launch without assembling infrastructure yourself
- Sandbox and production share the same capabilities
- Hosting, ops, and product updates included in the fee
- Engineering capacity unbound from one person's calendar
- Institutional control without building the stack in-house

# White Label Wallet

*Distribute digital assets under your brand, configured from the Control Panel.*

Banks, fintechs, and platforms offer holds and transfers with their look and feel, under the same policy and audit model as the rest of the platform.

## Distribution

- Web (embedded or standalone)
- Native iOS and Android apps
- App Store and Google Play

### Features

- Per-user wallet from first access, managed from the Control Panel
- Holds, transfers, and balances built in
- No seed phrases or gas management for end users
- Configurable branding and onboarding under Growie's look and feel
- KYC and identity hooks into the systems you already use
- Policies, limits, and allowlists applied from the Control Panel

 Digital Assets  
Switch to this account

### Benefits

- Turn on the common wallet features — no extra cost in this solution
- Reach end customers without building every screen from scratch
- Live under Growie's brand in weeks, not quarters
- Simple for the customer; clear for your operations team
- Same policies and audit trail as the rest of the platform
- Ship distribution while commercial keeps talking to the market

# How we work together

*From first use case to production — with technical accompaniment through launch.*

1

## Immersion

Weeks 1–2

- Align use case and modules
- Walkthrough of Control Panel and APIs
- Test environment: first flows
- Map providers, KYC, and roles

---

Team required:

**Ryle Product team + Your leadership team**

2

## Assisted launch

Weeks 3–6

- Production checklist
- Provider binding and KYB
- Signers, reserves, and endpoints
- First production flows, side by side

---

Team required:

**Ryle Engineering & Product + Your operations team**

3

## Accompaniment

First months in production

- Day-to-day operations support
- Reviews and hardening
- Runbook handover
- Stabilize before expanding

---

Team required:

**Your operations team + Ryle on support**

4

## Scale

Next stage

- Advise the next stage of the program
- Expand modules and assets
- New use cases and markets
- Commercial path to the next tier

---

Team required:

**Ryle Product team + Your leadership team**

Growie

# *Commercial Proposal*

# Commercial proposal for Growie

Selected solution

Platform & Wallet

Issuance, operations, and branded end-user UX.

- Blockchain Infrastructure
- Back Office / Control Panel
- White Label Wallet
- Sandbox + live · APIs & webhooks
- Hosting, ops, and product updates
- Standard support included

USD 8.500/mo

Flat fee

Included

Standard support

Included with this solution: the support Growie needs to go live and run day to day.

- Docs and onboarding path
- Shared support channel
- Platform bug fixes and product updates
- Sandbox help through live promotion

Included

In monthly platform fee

| COMPONENT          | SHAPE            | NOTES                                            |
|--------------------|------------------|--------------------------------------------------|
| Onboarding / setup | Instant          | Upon payment in advance of the first monthly fee |
| Contract           | Minimum 3 months | Initial term · then month-to-month or renewal    |
| Monthly platform   | USD 8.500/mo     | Platform & Wallet · flat fee                     |
| Hosting / cloud    | Included         | Sandbox + live · no separate Ryle infra bill     |
| Usage / scale      | Not applicable   | No usage or scale fee in this proposal           |
| Support            | Standard         | Included in the platform fee                     |
| Services           | USD 120/hr       | Optional FDE or custom software · on-demand      |
